

## Spent Acid Concentration Plant handed over to C.N. ROMARM S.A.

The commissioning of the plant for treatment and concentration of spent acid from nitration processes at C.N. ROMARM S.A. UZINA DE PRODUSE SPECIALE FAGARAS was successfully completed.

Plinke was responsible for engineering, supply and commissioning of the plant.

The plant concept combines separation and treatment of the spent acid, high concentration of the sulphuric and nitric acid, as well as the off gas treatment with recovery of nitric acid.

Operating with this process concept the client is able to recover all valuable acid components and to re-use them in his process.

Plinke GmbH, Bad Homburg,
